sustainability

journal

a little book about creating big change

What does a little zipper have to do with saving our great, big planet? The answer is, a lot. As one of the world's largest zipper manufacturers, YKK is protecting our environment, by ramping up sustainability efforts across the entire company, benefiting employees, communities and the thousands of apparel companies that use YKK® fastening products.

From offering products made with recycled ocean bound plastic to achieving net-zero emissions by 2050 to supporting local schools, YKK believes that from small parts come big benefits. As you flip through this journal, enjoy these stories of hope and celebrate the positive change we can create together.

by 2050, our loftiest business goal is to hit zero

YKK sustainability vision 2050 is under way, creating a brighter future for nature and humanity. With our planet in peril, it's a welcomed light of hope.

how?

The vision aims to reduce greenhouse gas emissions to zero by switching to renewable power, converting to 100% sustainable materials, as well as reducing water and chemical use.

YKK's leadership team, as well as employee input from all global regions, crafted the vision, encouraging teamwork and ownership for all.

why?

With a global footprint in over 70 countries and regions, YKK realizes it can make a positive impact for future generations. It will require incredible dedication by employees and partners working together with innovation and a healthy supply of heart and soul.

It's an extraordinary vision for sustainability with compassion and concern for all people.

“The natural environment is our most precious stakeholder.”

— Hiroaki Otani, President,
YKK Corporation

sustainability vision 2050

YKK's action plan for a sustainable future

climate change

carbon neutral by 2050

material resources

100% sustainable textile materials by 2030

water resources

reduce water use & increase wastewater recycling

chemical management

reduce chemical usage by new production methods

respect people

ensure safe fair workplaces throughout our supply chain

Sustainability and innovation are interlinked. YKK is focused on minimizing environmental impact with innovative ideas in design and manufacturing. It's the right thing to do for the planet.

“ It’s wonderful to work with YKK. They asked us to be partners with them on climate change.”

- Cara Chacon, Patagonia,
VP Social & Environmental Responsibility

to lower carbon emissions, we all need to step up

how?

YKK's NATULON® product line is an example of that essential relationship, moving away from petroleum-based materials in the manufacturing process. Both the zipper chain and the tape are made from recycled, plastic bottles.

So far, more than 1,000 tons of plastic waste have been recycled to create the zippers.

Using less petroleum and more recycled plastics helps reduce greenhouse gas emissions and mitigates climate change.

Great partnerships are essential to achieving a global solution. YKK is committed to the goals of the Paris Agreement, and as a signatory to the Fashion Industry Charter for Climate Action, YKK works with all stakeholders to achieve climate neutrality.

why?

YKK sustainability vision 2050 is a company-wide initiative to move toward “a brighter future for nature and humanity.” When you think of how many of these little zippers are out there, innovative design and manufacturing can create a big difference for the health of the planet.

to invent the ECO-DYE® technology, the first ever waterless dyeing technology for zippers, a team of innovators partnered with engineers, professors and their own curiosity.

how?

Creating something that had never been done before required over 10 years of relentless experiments and aligned partnerships. The result is ECO-DYE®, an innovative dyeing technology that uses carbon dioxide to reduce water usage in the zipper's dyeing process to zero.

The ECO-DYE® technology applies supercritical carbon dioxide instead of water to dye zippers. The ECO-DYE® technology achieves the same high-quality look as conventionally-dyed YKK® zippers and the process does not require drying, which also saves energy and reduces greenhouse gas emissions.

why?

Water conservation is essential for human life. Currently, 1 in 3 people lack access to clean water. YKK understands the scale and urgency of the problem. As a solution, the ECO-DYE® technology reduces water usage and our carbon footprint gets smaller. It's born from a drive to help humanity by protecting life's most precious resource: water.

"We decided to do something revolutionary."

- Takashi Saito, Sr. Engineer

TADAO YOSHIDA, YKK FOUNDER

YKK FOUNDER TADAO YOSHIDA
WITH PRESIDENT JIMMY CARTER
IN GEORGIA

Since Tadao Yoshida founded YKK in 1934, the company has been guided by the belief that the health of business and society are connected. These days, with a planet in peril, YKK is leaning into the urgency of the moment, elevating sustainability efforts through innovation, while ensuring that producing high quality products goes hand-in-hand with taking care of people and the world we live in.

how?

YKK's ethos is grounded in fairness. It began with a mission to make things that last coupled with a concern for people and the larger society. Today, YKK's focus on sustainability in both manufacturing and product development is aimed at reducing greenhouse gasses emissions to zero by 2050.

YKK's ethos of fairness extends to human rights, diversity, ethical labor practices and community involvement because it supports the founder's vision and it's the right thing to do.

why?

If business thrives as it ensures a healthier planet, it helps society and elevates everyone's quality of life. Today, in over 70 countries and regions, one philosophy guides the company and illuminates a way forward to ensure the people and the planet prosper.

cycle of goodness[®]

The Cycle of Goodness[®] philosophy, articulated by YKK's founder Tadao Yoshida, is grounded in the notion that business belongs to society.

When the benefits are shared, the value of the company's existence will be enjoyed by all.

**“no one
prosper
without
rendering
benefit
to others”**

teaching more than sewing. stitching together dreams.

At YKK's Social Development and Vocational Center in India, young women learn more than stitching, embroidery, computer skills and English. They are empowered to pursue their dreams and help their community thrive.

how?

The school, located on the site of YKK's manufacturing facility in Bawal, invites 10-15 students from nearby villages to attend the one-year training course. They are provided with uniforms, meals and study materials. What they gain throughout their study is priceless.

"I gained many friends. Meeting them and interacting with them has enhanced my confidence level," said Smun, a recent graduate.

Upon graduation, students receive something even more valuable than a diploma: a sewing machine.

why?

YKK created the school to contribute to a sustainable society by giving back to the community. Students discover ways to support their families while pursuing new careers.

Some start their own stitching business, others work in computers, or aspire to create their own apparel brand. All graduates have an opportunity to gain independence and a greater world view.

"Coming to the school has made me more confident in becoming independent and achieving my dreams."

- Puja, recent graduate

to help a community YKK went to school

how?

YKK El Salvador recently completed an amazing project supporting the community there. The elementary school, located near the YKK facility, was at risk from gang activity. YKK designed and constructed a protective wall, keeping kids safe, allowing them to feel protected and play safely outside.

why?

YKK is committed to being a reliable community partner. For the school in El Salvador, that means providing support on a consistent basis, like computer equipment, property repairs and supporting music classes for the kids.

The project is one example of YKK reaching out to support the local community. It's the belief that a manufacturer must be balanced by making society a better place for all.

**“What we’re building
is the possibility to
make a difference.”**

- Marco Baratta, Human Resources Manager,
YKK El Salvador

A person wearing a blue and black jacket and a dark hood stands on a rocky beach, looking out at the ocean. The scene is captured at sunset or sunrise, with a warm, golden light in the sky. The ocean waves are breaking on the shore, and the rocks are dark and wet. The overall mood is contemplative and serene.

As the threat to our oceans increases, YKK is harvesting plastics from beaches and waterways, recycling PET bottles to create high quality products. **This isn't a trend.** It's a belief that the changes we make today are only as meaningful as the impact we create for generations tomorrow.

the ocean gives us life. let's return the favor.

how?

YKK's legacy of environmental protection became formalized in 1994 when the "YKK Environmental Pledge" was established to help elevate conservation standards across the company.

Today, YKK is pushing technology while pulling together sustainability partnerships. YKK employees in Sri Lanka are working with the community to collect PET bottles, which will be used to help create NATULON® Ocean Sourced™ zippers.

why?

The YKK Group has deemed "harmony with the environment" as the highest priority of its business activities. The benefits are clear. Cleaner oceans and beaches, as well as the reduction of greenhouse gas emissions, leads to a healthier planet and a better quality of life for all people.

It's natural for YKK to care for our beautiful oceans and ensure a healthy environment. The oceans cover 71% of our planet and give us life. It's time that we all give the effort to clean them up.

conclusion

The seeds of sustainability were planted in 1934 when YKK first pledged to craft high quality, durable products. Today, YKK's commitment to sustainability is comprehensive, with a lens aimed at achieving a carbon neutral footprint as the touchstone of the YKK sustainability vision 2050. This long term plan comes with a sense of urgency to create solutions today.

YKK's approach to sustainability is holistic. That means not just creating greener products and manufacturing processes, but also building sustainable relationships by ensuring fairness in our communities and for our employees, while promoting equality for all.

When it comes to sustainability, there really is no conclusion. Through collaboration and partnership, we can do amazing things. We are on this journey together, to better connect, protect the planet and care for each other.

YKK®

YKK is a registered trademark of YKK CORPORATION in Japan and other countries/regions. "ECO-DYE", NATULON, NATULON Ocean Sourced, and Cycle of Goodness are trademarks of YKK Corporation.

Since the company's founding in Tokyo in 1934, YKK has continuously set industry standards for quality, service, value, and innovation in the production of zippers, plastic hardware, hook and loop fasteners, webbing tapes, and snap and buttons. With integrated production and supply systems in 72 countries and regions around the world, YKK is positioned to meet the needs of the textile and sewing product industries as they

increasingly diversify and require shorter product cycles. Guided by the CYCLE OF GOODNESS® philosophy - no one prospers without rendering benefit to others - YKK aims to contribute to a sustainable society through its products and manufacturing operations and constantly seeks new ways to serve the changing needs of its customers while at the same time investing in its employees and giving back to its communities.
